There are three influencing factors missing for dry season sensitivity (T_d , T_{oc} , and T_{ece}). During the paper preparation, when we copied and pasted the factor analysis result from the original table from Microsoft Excel into Microsoft Word, these factors were omitted. The correct Table 7 should read as follows:

Table 7. Selected factor analysis models.

	Influencing factors	MSA	KMO	Bartlett's test
Dry season	DI, slope, LS, TWI, DDG, TRI, depth, NO, T_d , T_{oc} , T_{ece}	≥ 0.53	0.730	0.000
Wet season	P_e , CON, T_w , T_{hy} , S_{hy} , ED	≥ 0.57	0.634	0.000
