Supplement of

Effect of tides on river water behavior over the eastern shelf seas of China

Figure S1. (a) The 3-year variation in the total kinetic energy of the models for the control run and no-tide case, respectively. (b) The variation in the total kinetic energy in the first month.

Figure S2. The relative change in the vertical turbulent diffusivity coefficients in February (a) and August (b) after removing tides in the model.
Figure S3. Monthly and vertically averaged velocity for the control run (left panels) and no-tide case (right panels), respectively. (a, c) for February and (b, d) for August.
Figure S4. (a) Tidal ellipses for $M_2$ tide. (b) Contour lines of coamplitude (solid lines, with an interval of 0.2 m) and cophase (dashed lines, with an interval of $30^\circ$) for $M_2$ tide.
