

Supplementary material 4: Distributions by country of the streamflow signatures in the catchment set used in the paper.

Each of the twenty plots shows the distributions of a given streamflow variable. Q_{mean} : Annual mean flow, $Q[0.01-99]$: Flow percentiles, $Q[hf-lf]freq$: Frequency of [high-low]flow events, $Q[hf-lf]dur$: Duration of high-low flow events, BFI: Baseflow index, SFDC: Slope of the flow duration curve, $Q[C-L-H]V$: [Total-Low-High]flow variability, QAC: Flow one day autocorrelation, RR: Runoff ratio.
