Received and published: 23 April 2013

Dear Dr. Spaaks,

I agree with both reviewer that the proposed model diagnostics is appealing ...

I also agree with reviewer. I that a few of the underlying assumptions concerning data availability and quality appear a little optimistic.

I would like to encourage you to reply to the reviewer comments before you resubmit your manuscript. Please note that your response to the reviewers is not the fully elaborated line to line rebutal of the reviews.

C1043

The response provides you the opportunity to discuss the points raised by the reviewers and stimulate a little debate.

I will come up with my recommendation after the open discussion has been closed.

Best regards

Erwin Zehe
