Received and published: 29 April 2013

In principle I agree with the review. However, according to my impression, the reviver gives too much focus on the part of karst-glaciology within the project. In regard to the overall issue of the study the intensity of treatment the karst- glaciological part is sufficient. A more detailed investigation of this part may most probably not lead to additional information in availability of fresh water in future.
