Received and published: 3 June 2013

The manuscript is interesting and well-written, I have only minor comments:

in general I would avoid repetitions in the intro and in the conclusions

it is interesting that differences in runoff due to climate change are larger in the low-resolution simulation with respect to the high-res; can the author guess why?

typos:

5687:9 "tropical: -> "sub-tropical" 5687:27 "may be the particularly affected by climate change" -> "may be particularly affected by climate change" 5695:2 "It is worth nothing" -> "It is worth noting" 5722:5 "in validation in the hydrological model" -> "in validation

C2182

of the hydrological model"
