Equation 6 is not correct since, as it is expressed now, it does not take into account the proportion of the downwelling longwave radiation ( $R_{la}$ ) that is reflected by the surface. Since the land surface is not a blackbody ( $\text{emissivity}_e < 1$ ), and according to the Kirchoff's law, it should reflect longwave radiation by a factor of  $(1 - \text{emissivity}_e)$ . Therefore, Eq. 6 should be expressed as follows:

$$R_n = (1 - \text{albedo}) * R_{sg} + \text{emissivity}_e * R_{la} - R_{le}$$

C25

where  $R_{la}$  and  $R_{le}$  are expressed as in Eqs. 7 and 8
