Received and published: 12 March 2013

Dear Authors,

The paper has clearly been appreciated by the anonymous referees and by Dr Andreassian. The main issue raised by the reviewers is that some more attention must be given to the use of the NSE, which performs better in seasonal climates. I think referee#3 made valuable suggestions in this regard.

In general this paper offers an important contribution to the synthesis of the PUB decade and we look forward to a final draft of the paper.

Before you submit a final paper, however, I would like you to reply to the discussants in the interactive discussion, preferably giving them an opportunity to react before you C313

submit the final paper.

Hubert Savenije
