On Page 8151, line 12, you write that you modified the method of Piani et al. 2010a by selecting the 5 nearest stations to each model grid point for the bias correction instead of a gridded dataset. This procedure has already been presented and applied by Gutjahr et al. 2013, although in their study only the 3 nearest stations were chosen. I think therefore the reference to their paper should be included.
