

Interactive comment on “A new technique using the aero-infiltrometer to characterise the natural soils based on the measurements of infiltration rate and soil moisture content” by M. A. Fulazzaky et al.

Anonymous Referee #2

Received and published: 5 December 2013

The literature survey is poor regarding water infiltration and null regarding air infiltration. No theoretical insight is provided of the process of air infiltration in unsaturated media.

A long fitting exercise is not enough to do a paper.

The idea of using air instead of water is not bad in principle, but a more scientific approach is required.

The units should not be psi and mm, but international ones.
