

Interactive comment on “ESOLIP – estimate of solid and liquid precipitation at sub-daily time resolution by combining snow height and rain gauge measurements” by E. Mair et al.

E. Mair et al.

giacomo.bertoldi@eurac.edu

Received and published: 17 December 2013

The work of Elisabeth Mair has been supported by the project ‘HydroAlp’ of the Autonome Provinz Bozen – Südtirol Abteilung Bildungsförderung, Universität und Forschung.

This study was conducted on the LTER sites ‘Stubai Valley’ (AT, master site, member of the LTSER platform ‘Tyrolean Alps’) and ‘Matsch Valley’ (IT, emerging site). The institutions involved are part of the interdisciplinary research centre ‘Ecology of the Alpine Region’ within the research focus ‘Alpine Space – Man and Environment’ at the

University of Innsbruck.

We would like to thank the Hydrographic Service of the federal state of Tyrol for technical support with the snow pillow and related measurements and the Hydrographic Office of the Autonomous Province Bozen for providing data, especially the observer, Mrs. Maria Luise Schwalt Seidl, at the station in Matsch.

We thank Nikolaus Obojes for language editing and Brigitte Scott for final editorial service on the manuscript.

We would like to thank Michael Engel for his help in collecting and elaborating field snow data. His work has been supported by the project EMERGE of the Dr. Erich-Ritter-Stiftung and Dr. Herzog-Sellenberg-Stiftung within the Stifterverband für die Deutsche Wissenschaft.
