The authors first of all want to thank the referees for their work. It is appreciated that they read the paper thoroughly and gave comments and reasons for their decision. Nevertheless the referees have both voted to reject the paper, therefore a comment is not really necessary. From our side the comments of anonymous referee 2 were helpful for the next papers and for further research, whereas the comments of reviewer 1 were very general and sometimes contraproductive - as the comment on the language (professional editage service involved before submission stated good language!). Additionally the more than 400 downloads show that several colleagues worldwide are

C8454

interested in the topic - and hopefully also could take advantage of the presented applications. Thank you again for your comments,

Wolfgang Gossel and Ronny Laehne
