Dear professor Li, Thank you very much for your comments and suggestions. The effects of ecological factors and human activities on NPS pollution is an important issue for watershed integrated management. It is also a hotspot and difficulty in the field of NPS pollution research. I agree that some of the expressions in this article should be improved and we will correct them in the revised version. Hope to discuss the following version or some other topics concerning NPS pollution with you. Thanks

C122

again for your time.
