

***Interactive comment on “Large-scale regionalization of water table depth in peatlands optimized for greenhouse gas emission upscaling” by M. Bechtold et al.***

**Anonymous Referee #3**

Received and published: 13 May 2014

The paper is of general good quality and should be accepted for publication soon. Maybe, minor revision are necessary, as they are already listed in the reviewer's comments nr 1 (supplement). The paper would benefit, if the method 'boosted regression trees' would be explained in more detail.
