

Interactive comment on “Modelling of snow processes in catchment hydrology by means of downscaled WRF meteorological data fields” by K. Förster et al.

B. Schaefli (Editor)

bettina.schaefli@epfl.ch

Received and published: 13 May 2014

This paper already received 2 reviewers' comments and a short comment; all three comments agree on the fact that the scope, abstract and title of the paper is misleading given that while reading the paper the reader learns that downscaled precipitation is finally not involved anymore for the simulations.

While waiting for the 3rd reviewer comment, I would like to invite the authors to answer as soon as possible this general critic of the paper (perhaps before submitting a complete answer to each of the above comments) and explain how they plan to address
