

Interactive comment on “Cloudiness and snow cover in Alpine areas from MODIS products” by P. Da Ronco and C. De Michele

B. Schaefli (Editor)

bettina.schaefli@epfl.ch

Received and published: 10 June 2014

Both reviewers agree that this paper presents an interesting and innovative approach to estimate snow cover from partly cloud obscured MODIS images; they both give a detail set of comments for required revisions before publication in HESS. I would like to invite the authors to revise their manuscript along the responses they have given in the public discussion and look forward to receive the new version, which will undergo a re-review.
