Received and published: 30 June 2014

We are grateful for your concentration on our manuscript. According to your comment and the comment from other 2 reviewers, the appropriate accuracy assessment has been added, we have implemented the test on the stable ground. A better cartographic presentation of the results is considered, Figure 1, 4, 9 have been reproduced with moderate resolution as well. Additionally, the reference from Paul et al. (2013) is also properly cited in the revision.
