dear authors,

thanks for the extensive and serious replies to all the reviews. As is clear from the reviews, the paper is seen as innovative and interesting. It clearly fits in HESS.

In my opinion, a major part of the concerns and remarks of the reviewers relates to unclear definitions, terminology, explanation and clarity of figures, etc. This also lead to questions on your findings or the explanations of your results. You agreed to that point in your replies (and already explained some of the issues).

I therefore decided that your paper can be accepted in HESS, however, the paper

C2135

needs major revision along the lines indicated in the replies. I am quite confident this will improve the impact your paper could have.

I look forward receiving a revised version in due time

Thanks for the interesting paper and discussion, Kind regards, Thom
