

Interactive comment on “Selection of intense rainfall events based on intensity thresholds and lightning data in Switzerland” by L. Gaal et al.

Anonymous Referee #1

Received and published: 2 March 2014

The authors acknowledge and address previously raised questions in detail in their response. As a reviewer, I am profoundly satisfied with the details given in their discussion. I am very confident that the authors will properly address them and clarify the questions in the final revision of their manuscript.

I suggest that further revision/discussion is not needed after the final version of this manuscript is submitted by the authors.
