

Interactive comment on “Selection of intense rainfall events based on intensity thresholds and lightning data in Switzerland” by L. Gaal et al.

Anonymous Referee #2

Received and published: 7 March 2014

This is a nicely written paper and I recommend it for publication in HESS. The topic is important and the results clearly presented. The authors have already responded to comments raised by Reviewer #1 and I do not have any additional suggestions. One minor comment only: the title of Section 3.1 should not include ‘counts’ as you consider the presence of lightning, not their counts.
