

***Interactive comment on “Geochemical controls on the partitioning and hydrological transport of metals in a non-acidic river system” by J. Thorslund et al.***

**Anonymous Referee #1**

Received and published: 7 October 2014

The subject of this paper could be interesting if the tools that have been used were relevant. The number of samples is too small to be representative of the water quality. This remark is also true for the flow measurements. In addition, the thermodynamic code was not used in an appropriate manner. Kind regards
