

Interactive comment on “Do changes in climate or vegetation regulate evapotranspiration and streamflow trends in water-limited basins?” by Q. Liu et al.

B. van den Hurk (Editor)

hurkvd@knmi.nl

Received and published: 12 December 2014

I share the view of the reviewers that the methodology should be explained more clearly, and that puts the scope of the paper at the right level. It's probably best to change the title to make it seem a bit less ambitious.

Please provide a new version of the manuscript that clearly shows the differences to the original manuscript. Also please provide a document that lists your point-by-point replies and also shows the changes that are made to the new manuscript.
