

**Review for manuscript:**

hess-2015-387

Assessment of small-scale variability of rainfall and multi-satellite precipitation estimates  
using measurements from a dense rain gauge network in southeast India

K. Sunilkumar, T. Narayana Rao, and S. Satheeshkumar

**Decision: Accept As Is**

The authors did a great job in improving the paper's overall readability and the way it is presented. It reads much clearer and also the improvement of the figures added a lot to the clarity of the author's findings. I very much appreciate the in-depth work of the author's in explaining and answering all of the review questions in great detail while pushing the condensed content of the answers including added citations into the paper.

I don't see the need for further revision and recommend accepting the paper as it is.
