Received and published: 10 February 2015

The reviewers have raised some legitimate concerns about the paper, including the length, the argumentation, and the framing of water security. However, they have been uniformly positive about the paper, and I believe they are supportive about eventual publication of the paper in HESS. I would like the authors to proceed with the revisions - while I wait for the last reviewer to come through with their reviews. I look forward to helping to evaluate the revised paper in short order.
