Received and published: 13 September 2015

The reviewers were relatively positive regarding the importance of the topic. Some major issues have been raised however by the reviewers that have to be addressed by the authors. In particular editorial work is needed to make the paper more clear and concise. The authors have to address the accuracy of the kriging product, the sensitivity of the simulations to parametrizations and to boundary conditions and the spatial distribution of measurements. In addition, some statistical analysis is needed.
