

Interactive comment on “Satellite signal shows storage-unloading subsidence in North China” by J. P. Moiwo and F. Tao

B. Schaeefli (Editor)

bettina.schaeefli@epfl.ch

Received and published: 18 September 2015

I read the response to all reviewer comments carefully. After revision, the paper will go into a second round of reviews. The revised version should also account for a comment of reviewer one which the authors did not response to:

"Explanations on how the authors come to such large scale land subsidence estimations and how they interpolate GPS measurements are lacking."

Interactive comment on Hydrol. Earth Syst. Sci. Discuss., 12, 6043, 2015.
