Received and published: 30 September 2015

The main point raised in the 2 reviews relates to the choice of the rainfall products that were selected as typical of the gauge product family, on the one hand, and of the model product family, on the other hand. We thus address this essential issue first (common answer to the two reviews at the begin of the replies), and we then provide point by point answers to the other, more technical, comments, separately for each review. The modifications made in the manuscript in order to make the paper more

C3956

clear and concise are described in these answers.
