Dear Chris,

Thank you very much for the positive comment on this paper.

I would like to use this chance to mention that the tools used in this paper (i.e. Bayesian and Singularity-sensitive Bayesian data merging tools) have been implemented as executable programmes and I can make them available to anyone wanting to test/use them. The current version of the tools is for the Win32 environment and works with standard CSV and ESRI ASCII Grid formats. Anyone interested in using these tools

C498

can contact me (Li-Pen Wang: lipen.wang@bwk.kuleuven.be) and I'd be happy to provide the executable files along with instructions for their use.

Kind regards, Lipen
