

# ***Interactive comment on “How to predict hydrological effects of local land use change: how the vegetation parameterisation for short rotation coppices influences model results” by F. Richter et al.***

## **Anonymous Referee #1**

Received and published: 4 February 2015

Dear authors

Please, find here some minor revisions to upgrade your paper:

-Introduction. the authors give the aim and hypothesis, but it would be remarkable to clearly address the main goals/objectives.

-Discussion. This section could be improved whether the authors discussed their results regarding other studies conducted in similar/different environments and condi-

tions.

-Conclusions. This section is quite long in my opinion. Please, be more concise and follow the scheme i) ii) iii) giving answer to the study goals.
