

Interactive comment on “Landslide susceptibility mapping of Cekmece area (Istanbul, Turkey) by conditional probability” by T. Y. Duman et al.

H. Yamagishi (Referee)

hiroy@env.sc.niigata-u.ac.jp

Received and published: 30 May 2005

On the data, the author should make landslide distribution map. Because, he is dealing with the GIS techniques, but he is only dealing with the background conditions by the GIS. But, on landslides he is only case studies.

The abstract is too long. Should be shorten.

The author should improve English.

Legends in several figures are too small to be seen, and some symbols of graphs such as Fig.11 should be changed into lithogoligic names from formation name, because the reader can not understand.

The references are too many. He should select the references which he need.

Discussion Paper

Finally, if the author make minor change such as English based on grammer, and figures, and make landslide distribution map by aerphotographs and GIS, the paper is allowed to print in HESS journal.
