

Interactive comment on “Satellite data interpretation of causes and controls on groundwater-seawater flow directions, Merseyside, UK: implications for assessing saline intrusions” by S. Mukherjee et al.

S. Mukherjee et al.

Received and published: 5 September 2005

I strongly support the scientific technique for identification of hidden faults in the Merseyside area of the paper. I request the reviewer to kindly go through ERDAS, GEOMATICA, GEOIMAGE, IDRISI and other softwares and the global publications in highly recommended journals like "International Journal of Remote Sensing". The comments given by the reviewer against the paper under publication is not scientifically justified and I request the Editor to get the paper reviewed by reviewer who has published papers globally in reputed journals.
