

Interactive comment on “The scale of typhoon RUSA” by N. W. Kim et al.

G. Blöschl (Editor)

bloeschl@hydro.tuwien.ac.at

Received and published: 22 December 2006

The paper presents potentially very interesting material. However, as all three referees note, the paper is incomplete. For the paper to become publishable in HESS the authors would have to add:

- a full description of the data including station details and measurement errors,
- a full description of the methods used including a discussion of potential errors,
- geographical locations in a way that is clear to an international audience, and
- a meteorological interpretation.

Details are given in the referee comments.

Discussion Paper

Some re-writing is also needed to better link the paper to the international literature and to better bring out the message of the paper. In responding, the authors should give a detailed list of how they have addressed each of the review comments.
