

Interactive comment on “Sensitivity of point scale runoff predictions to rainfall resolution” by A. J. Hearman and C. Hinz

M. Sivapalan (Editor)

sivapala@uiuc.edu

Received and published: 6 February 2007

The paper has had the benefit of insightful comments from three reviewers. Apart from technical issues - incorrectly stated and dimensionally incorrect equations - the main criticisms are 1) poor articulation of the aims of this study, 2) inadequate justification of the model used, and 3) inadequate discussion of the results, ie why these results are significant. I suggest that the authors complete the revisions as per their response to the reviewers, and resubmit to HESS for further consideration.
