

Interactive comment on “Hydrological model coupling with ANNs” by R. G. Kamp and H. H. G. Savenije

D. Solomatine (Editor)

d.solomatine@unesco-ihe.org

Received and published: 28 February 2007

The editor agrees with the reviewers' comments. Indeed, the objectives, the presentation and especially the *justification* of the approach are not very clear. Experiments need a better description as well, especially in the part of the used data. Comparing the presented model with a "global" single-ANN model would be a good thing to do.

Does the title correctly reflect the essence of the approach: are, indeed, models are coupled with ANNs?

All this needs attention when a revised version is prepared. The authors are invited to address the comments and to resubmit the manuscript.
