

Interactive comment on “Influence of rainfall observation network on model calibration and application” by A. Bárdossy and T. Das

H. Bormann (Editor)

helge.bormann@uni-oldenburg.de

Received and published: 22 October 2007

Dear authors,

two of the three referees stated that your contribution is interesting, significant and worth for publication in HESS. The third referee first of all struggled with the presentation of the results in your manuscript. However, all referees also stated that a number of corrections is required, in particular with respect to structure and content.

Unfortunately up to now you neither have provided an author comment nor a final response which would be highly desirable to learn about your opinion on the referee's comments.

Nevertheless, based on the reviews I would like to ask you to prepare a revised version of the manuscript. Please again submit the manuscript via the HESS online system. In addition, it is mandatory to provide a covering letter in which you state where and in which way you considered the suggestions of the referees (or why not). Without such a letter your manuscript cannot be further processed.

However, I am looking forward to receiving the revised version of the manuscript and the author comments on the reviews. Helge Bormann.
