

Interactive comment on “Pattern, process, and function in landscape ecology and catchment hydrology – how can quantitative landscape ecology support predictions in ungauged basins (PUB)?” by B. Schröder

B. Schröder

Received and published: 20 September 2006

Many thanks for this very constructive comment. The suggestion to extend the review focus on research studies in the area of ecohydrology and landscape ecology of arid and semi-arid regions is highly acknowledged. I will add another section on this topic (2.3 Arid region ecohydrologic research) together with at least one instructive example in section 3 (as called for by the third referee). This will undoubtedly extend the ms but result in a considerable benefit. As far as place limitations allow, I plan to add some more examples on related topics such as ecosystem engineering.
