

Interactive comment on “Computationally efficient calibration of WATCLASS Hydrologic models using surrogate optimization” by M. Kamali et al.

Anonymous Referee #1

Received and published: 1 October 2007

The paper lacks scientific quality and technical soundness. The objective of the work is not clearly described, references to previous work and state-of-the-art in the field is inappropriate, and the presentation of the material is incomplete. Thus, the paper is not in a stage where it can be considered for publication in HESS.
