

## ***Interactive comment on “Filter properties of seam material from paved urban soils” by T. Nehls et al.***

**P. Grathwohl (Editor)**

grathwohl@uni-tuebingen.de

Received and published: 31 October 2007

The authors provide a well written paper about a timely topic relevant for urban hydrology. The analytical methods used seem sound, data are combined with numerical modeling. A large variety of samples was thoroughly characterized, as such the paper provides a valuable database and it certainly deserves to be published. The authors are requested - and they already agreed - to revise the manuscript following the many comments given by reviewer 1. It would be appreciated, if a detailed report is provided about the changes made along with the revised manuscript. During revisions the English should be checked (e.g. consider multimolecular instead of polymolecular, deposition instead of depositions, etc.), Figs. and tables should be checked for consistency (e.g. in Table 2 units for  $E_a$  are missing). After that the paper can be published in HESS.
