The paper named "*Rainfall intermittency and vegetation feedbacks in drylands*" by Mara Baudena and Antonello Provenzale deals with a topic of great interest for this special Issue. In fact, the role played by rainfall intermittency on vegetation dynamics represents a challenging aspect of ecohydrological research. This work provides some interest analysis on this topic.

I want to remark the excellent work made by the referees that have provided constructive reviews of the paper useful to improve its final quality. Both referees of the manuscript agree in finding this paper interesting and suitable for publication in HESS after minor revision that have been already addressed by the authors. Based on these
