

Interactive comment on “Eutrophication and Phosphorous accumulation in sediments of Karlskärsviken, bay in Lake Mälaren” by G. Olli

G. Olli

Received and published: 12 September 2007

Dear Alberto Montanari,

I have thoroughly revised the manuscript addressing all the referee comments and recommendations, with my detailed responses attached. I have reconstructed the presentation of the methodology and the results, according to the suggestions by the referees. The comment on page 1834, line 13 – 14 was a misunderstanding. This study starts when Lake Mälaren had gone into its freshwater phase. To clarify this, a sentence is added under Introduction in the paragraph about the aim. An analysis of the reliability of the results is also added, as recommended by the referees (e.g. p14, line 22 -23).

I hope that with these modifications, the manuscript will now be suitable for publication
