Received and published: 2 September 2008

I have been following the interesting discussion phase as the article tackles specific key issues. However, after having read again the paper, it seems that authors' replies are weak in a few points and tend to sidestep a bit the amendments from the two reviewers. The authors' reply also gives the impression that everything turns on the outcome of an ongoing experiment to be presented in a subsequent paper. If so, the work presented is not stand-alone as it could be affected by some results yet to come. Anyhow, my overall suggestion is that the paper is not in a form to be transferred in the HESS phase; and major revisions and reorganization are required before it is submitted again in HESSD. Or, the authors should provide more convincing comments.
