

Interactive comment on “The dynamics of cultivation and floods in arable lands of central Argentina” by E. F. Viglizzo et al.

F. Laio (Editor)

francesco.laio@polito.it

Received and published: 21 October 2008

The paper has been reviewed by 2 independent referees: Reviewer #1 is rather critical towards the paper, and recommends to reject the paper. Reviewer #2 (David Le Maitre) has a more positive attitude towards the manuscript, and recommends acceptance after a major revision. I have carefully read the manuscript and the reviewers’ recommendations, and I believe that the paper is across the threshold between acceptability and rejection. My proposal is to provide the chance to the Authors to substantially improve their paper following the reviewers’ comments, and resubmit a thoroughly revised version to HESS. I would therefore recommend to return the paper to the Authors for major revisions, with a clear indication that a lot of

revision work is still needed for the paper to become acceptable for HESS.
