

Interactive comment on “The dynamics of cultivation and floods in arable lands of central Argentina” by E. F. Viglizzo et al.

E. F. Viglizzo et al.

Received and published: 24 November 2008

Comments of REF 2 (D. Le Maitrre) The differences in slope above and below the 110-120 m contour could be shown more clearly by producing a slope class map at least for the portion of the area shown in Fig 2. I presume that the units for groundwater are meters below ground level. If so, this should be stated on the axes in the Figures. There are some places in the MS where it was difficult to follow what the authors were trying to say. There are some typographic errors. I think these should be dealt with once the major issues described above have been resolved.

Reply from Viglizzo EF: Data on slopes above and below the 110-120 m contour will be inserted in a new version of Fig 2. Besides, a statement regarding meters below ground level for groundwater figures will be inserted on Figures axes. Typographic
