

Interactive comment on “Modelling dominant runoff production processes at the micro-scale – a GIS-based and a statistical approach” by C. Müller et al.

S. Uhlenbrook (Editor)

s.uhlenbrook@unesco-ihe.org

Received and published: 3 December 2008

The paper received 5 reviews and all reviewers were quite critical and made many specific remarks. The authors did a very detailed job in responding to all issues raised by the reviewers. This resulted in a very lively discussion.

Concerning the possible publication of the paper in HESS: Because of the many critical remarks, I can only encourage the authors to resubmit a revised version of the paper if they are able to revise the current version very, very significantly. This would include the integration of new results.
