Interactive Comment

Interactive comment on "Spatial rainfall variability and runoff response during an extreme event in a semi-arid catchment in the South Pare Mountains, Tanzania." by M. L. Mul et al.

M. L. Mul et al.

Received and published: 15 December 2008

We highly appreciate the response and encouraging words from the editor. We are eager to present a final draft to HESS incorporating the comments raised by the reviewers and the editor.

Response to the comments: - We will critically look at the uncertainties of the methods used and discuss them in the final paper. - We check the results from the study using the world catalogue of maximum observed floods - We will rewrite the introduction of the paper to emphasis the scope of the study and link the conclusions accordingly

We hereby want to thank both reviewers and the editor for their valuable comments
