

Interactive comment on “Calibration and sequential updating of a coupled hydrologic-hydraulic model using remote sensing-derived water stages” by M. Montanari et al.

W. Wagner (Editor)

ww@ipf.tuwien.ac.at

Received and published: 23 January 2009

I would like to thank the reviewers and the authors for the extensive discussions which to my view clarified all open issues. Therefore I would like to ask the authors to include the discussions in the revised version of the paper, including the discussions about 1) the relevance of the work for PUB, 2) the accuracy of this method compared to existing hydrologic methods (i.e. updating by observed runoff data), and 3) the potential impact of remotely sensed soil moisture data on runoff prediction. Concerning the last point
