Comment

Interactive comment on “The role of integrated high resolution stratigraphic and geophysic surveys for groundwater modelling” by S. Margiotta et al.

S. Margiotta et al.

Received and published: 2 April 2009

We agree with the reviewers that thank for their important contributions. We acknowledge that the referee comments will improve the paper and we will correct it in the revised manuscript (for example about the title of the manuscript..:). For this reason we don't discuss the single referee comments because we altogether accept them. As the reviewers suggest we will also add clarifications about the hydrogeological section and the structure of the paper
