

## ***Interactive comment on “Estimation of streamflow by slope Regional Dependency Function” by A. Altunkaynak***

**A. Altunkaynak**

Received and published: 16 June 2008

Responses to Referee #1

Firstly, I would like to thank to reviewer for his/her constructive comments and encouragement. The following answers can be given to each point raised by the reviewer:

1. The objective of the study was given in the end of the introduction section
2. Since the data was taken from another study, the author did not need to give some information regarding the data. Instead of repeating the same information, readers refer to the study where the original data is taken from.
3. The author did his best to improve the language of paper.

All the specific comments were addressed in the new version of the manuscript.
