

Interactive comment on “Effects of intersite dependence of nested catchment structures on probabilistic regional envelope curves” by B. Guse et al.

M. Sivapalan (Editor)

sivapala@uiuc.edu

Received and published: 20 June 2009

The paper has received 3 review comments, all of which essentially say the same thing: while the content of the paper is satisfactory and interesting, there needs to be substantial improvement in the presentation (also English). The reviewers give detailed comments and suggestions about how to improve the manuscript. The authors should take heed, and come up with a strategy to improve the readability and impact of the paper, including detailed point-by-point responses to the reviewers' comments. I look forward to seeing their responses and reading the revised manuscript, which will then

C1283

be considered for publication in HESS.
