Received and published: 1 July 2009

First of all, we appreciate the time the reviewers put in reading the manuscript, and the comments were valuable, refreshing, and constructive. To be more comprehensive, we have provided a list of itemized responses to all review comments in the attached supplemental file (instead of responding to each reviewer’s comments individually), along with a tracked-change copy of the revised manuscript. Hopefully we have adequately addressed all the review comments.

Please also note the Supplement to this comment.
